MiniBank (Part B)

- Create a public class named MiniBank that contains the main method.
- Define a record named BankInfo with two String fields, name and branch (a record is a short, read-only class; Java auto-generates its constructor and field accessors). Print one BankInfo object as the application header.
- Define an enum named MenuOption with the constants OPEN_ACCOUNT, DEPOSIT, WITHDRAW, TRANSFER and EXIT — these are the actions MiniBank will offer.
- Display the numbered menu to the user and read the chosen number with a Scanner.
- Use a switch expression on the choice to print a short placeholder for that option (for example, "Deposit — to be implemented in a later lab"). Keep showing the menu in a loop until the user selects EXIT, then print a goodbye message.

Source Code (MiniBank.java):

```
package MiniBank;
import java.util.Scanner;

You, 2 months ago | author (You)
// Record
record BankInfo(String name, String branch) {}

// Enum
enum MenuOption {
    OPEN_ACCOUNT,
    DEPOSIT,
    WITHDRAW,
    TRANSFER,
    EXIT
}

You, 2 months ago | author (You)
public class MiniBank {

    Run | Debug
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        BankInfo bank = new BankInfo(name: "MiniBank", branch: "Anand Branch");

        System.out.println(x: "======================================");
        System.out.println(bank);
        System.out.println(x: "======================================");
```

```
        boolean running = true;
        while (running) {
            System.out.println(x: "\n===== MINI BANK MENU =====");
            System.out.println(x: "1. Open Account");
            System.out.println(x: "2. Deposit");
            System.out.println(x: "3. Withdraw");
            System.out.println(x: "4. Transfer");
            System.out.println(x: "5. Exit");
            System.out.print(s: "Enter Choice : ");

            int choice = sc.nextInt();
            MenuOption option = switch (choice) {
                case 1 -> MenuOption.OPEN_ACCOUNT;
                case 2 -> MenuOption.DEPOSIT;
                case 3 -> MenuOption.WITHDRAW;
                case 4 -> MenuOption.TRANSFER;
                case 5 -> MenuOption.EXIT;
                default -> null;
            };

            if (option == null) {
                System.out.println(x: "Invalid Choice!");
                continue;
            }

            switch (option) {
                case OPEN_ACCOUNT ->
                    System.out.println(x: "Open Account - To be implemented in later lab.");

                case DEPOSIT ->
                    System.out.println(x: "Deposit - To be implemented in later lab.");

                case WITHDRAW ->
                    System.out.println(x: "Withdraw - To be implemented in later lab.");

                case TRANSFER ->
                    System.out.println(x: "Transfer - To be implemented in later lab.");

                case EXIT -> {
                    System.out.println(x: "Thank You for using MiniBank.");
                    running = false;
                }
            }
        }

        sc.close();
    }
}
```

MiniBank Output:

```
PS E:\SEM-3 CSPIT\OOP\Practicals> cd .\MiniBank\
PS E:\SEM-3 CSPIT\OOP\Practicals\MiniBank> java .\MiniBank.java
=====================================
BankInfo[name=MiniBank, branch=Anand Branch]
=====================================

===== MINI BANK MENU =====
1. Open Account
2. Deposit
3. Withdraw
4. Transfer
5. Exit
Enter Choice : 1
Open Account - To be implemented in later lab.

===== MINI BANK MENU =====
1. Open Account
2. Deposit
3. Withdraw
4. Transfer
5. Exit
Enter Choice : 5
Thank You for using MiniBank.
